  software technology for, 255–256
  symbol presentation of, 259
Annotator
  advantages of, 22
  description of, 22, 27, 261
  functionality of, 261–262
  implementation, 262–263
  resources, 263
  user interface, 261–262
Applets, 4
Applications, 4
Arm movements, basal ganglia's role in, 50–53
Article repositories, 5–6, 20, 287
Atlas, of brain
  cell groups, 171
  cryosection imaging-based, 206
  expandable database uses, 176–177
  experimental data transferred to, 173–174
  expression of, 170–171
  fiber tracts, 171
  future of, 176–177
  magnetic resonance imaging-based, 206
  multi-modality, 206
  slice-based sampling, 169–171
  Swanson, 17, 179–180, 184–185, 209
  typical type of, 171–173
Atlas-based databases
  challenges for, 19
  description of, 17–18
  NeuARt, 17–18
  neurochemical data
    database design, 219–221
    description of, 217
    NeuroCore repository incorporation of, 222–225
    synaptic neurotransmission, 217–218
Atoms, 256–257, 292
atomTypes, 306–307
Attributes
  definition of, 35
  inheritance of, 36–37
  in object-based database model, 35–36

B

Basal ganglia
  Crowley-Arbib model of, 73
  description of, 9, 43
  in saccade control, 48–50
  in sequential arm movements, 50–53
Brain. *see also specific anatomy*
  flatmaps of, 176
  organization of, 168–169
  slice-based sampling of, 169–171
  structures of
    chemoarchitecture, 338
    cryoarchitecture, 338
    homology of, 339
    modules as, 45

Brain (*continued*)
time-series variation, 186
three-dimensional computer graphics model of, 174–176
weight of, 168
Brain atlases
brain-slice images registered against, 186
cell groups, 171
cryosection imaging-based, 206
expandable database uses, 176–177
experimental data transferred to, 173–174
expression of, 170–171
fiber tracts, 171
future of, 176–177
magnetic resonance imaging-based, 206
multi-modality, 206
slice-based sampling, 169–171
Swanson, 17, 179–180, 184–185, 209
typical type of, 171–173
Brain maps
experimental methods, 169
features of, 167–168
interactive, 171–173
linear rescaling, 173–174
Brain models on the web
components of, 291–292
database creation, 261
definition of, 297
description of, 11–12, 22, 237, 291
future directions for, 316–317
goal of, 297
NeuroCore links, 317
principles of, 25–26
schematic capture system links, 316–317
standards, 298
storing of, 297–298
summary database embedded in
browsing of, 308–313
clumps
browsing of, 310–312
description of, 306
inserting of, 316
searching for, 313
description of, 27, 261, 291–292, 298–299
documents
description of, 306
searching for, 313
experiments, 307–308
logging into, 308
models
description of, 303–305
inserting of, 314–316
searching for, 312–313
modules
browsing of, 309
description of, 305–306
overview of, 300–301
persons
description of, 302–303
inserting of, 314
references
browsing of, 309–311
inserting of, 313–314
synthetic positron emission tomography links, 317
tables, 301–302
Brain theory, 43–44
Broca's area, 44
Buffering, of modules, 77

C

Central nervous system, 168
Cerebellum
in classical conditioning
description of, 56–61
time-series database for studying, 120–125
description of, 9, 43
excitatory cells, 57–58
functions of, 53
inhibitory cells, 57–58
microcomplexes of, 53, 58–61
mossy fiber/parallel fiber inputs, 53, 57–59, 61
motor control and coordination models, 53–56
in prism adaptation, 54, 56
schematic representation of interactions, 55
Circuit-tracing methods, 169
Classes
definition of, 35
in object-based database model, 35–36
Classical conditioning
cerebellum's role in, 56–61, 120
description of, 56–57
time-series database designed for data
gathering of, 121–122
inputting of, 124–125
description of, 120
experimental preparation, 120–121
NeuroCore database extensions, 122–124
Classificational object-based data model, 237–238, 247–338
_clumpModel, 306
Clumps
browsing of, 310–312
description of, 20–21, 257, 289–290
distributed, 259–260
function of, 306
linking of, 306–307
retrieval of, 293–294
Cognitive map
description of, 61–62
locale system, 62
taxon system, 62
Collaboratory databases, 7
Composite concepts, 248–250
Conceptual intersection, 248
Conceptual negation, 248
Conceptual union, 248
Concurrency, of neural networks, 74
Conditioned stimulus, 14
conformacyType, 305
Connection masks, 78
Cooperative federated databases
environmental characteristics of, 247
heterogeneity in
common ontology uses, 244
data model, 242–244

description of, 242
semantic, 242–244
information flow patterns in, 248
information frameworks, 241
information repositories, 241
information sharing, 241–242
schematic representation of, 242
Core tables, 137, 301
Coriolis forces, 54

D

Dart model, of prism adaptation, 299, 302
Data
access to, 7–8
accessibility of, 117
annotated, 7–8, 22–23
heterogeneous, 4, 131–132
mining of, 132
types of, 5–7
Data model mapping, 220
Data schema, 6
Data type
description of, 37
opaque, 37–38
Database
access to, 7–8
annotation, 260–261, 263
article repositories, 5–6
atlas-based
challenges for, 19
description of, 17–18
NeuARt, 17–18
neurochemical data
database design, 219–221
description of, 217
NeuroCore repository incorporation of, 222–225
synaptic neurotransmission, 217–218
collaboratory, 7
definition of, 29
designing of
schema complexity addressed in, 118–119
user community considerations, 119–120
developments, 30–31
extending of, 132
linking of, 5
management system, 29–30
NeuroCore. *see* NeuroCore database
neuroimaging data
data, 129–131
description of, 129
object-based
classification of objects, 246
description of, 4, 30
object-relational, 4, 30
personal laboratory, 7
public refereed, 7
relational
classification of objects, 246
description of, 4, 30–32
structures stored in, 7
summary. *see* Summary database
time-series. *see* Time-series database
Database model
definition of, 30
object-based
attributes, 35–37
characteristics of, 34
classes, 35–36
components of, 35
description of, 33–34
object-relational, 37–39
relational, 31–32
schema complexity addressed, 118–119
DataMunch
description of, 160
development of, 161
future applications, 160
operating principles of, 160
DIANE, 256
Dictionary tables, 137, 301
documentType, 306
Domain integrity, 31
Dominey-Arbib model, 50
Dynamic classificational ontology
base ontology, 232, 247–249
classificational object-based data model, 237–238, 247–338
components of, 232
definition of, 241
derived ontology, 232, 247, 249–250
description of, 21, 247
information sharing mediators
description of, 241, 250–251
discovery, 252–253
export, 251–252
principles of, 232
prototype, 254
Dynamic synapses
axon terminal, 97
description of, 95–96
leaky-integrator equation, 96
learning algorithm, 96–97
mathematical expressions of, 96
speech recognition case study, 97

E

Elementary objects of the nervous system
components of, 13
description of, 12, 91–92, 100
object library, 92–97, 100
object-oriented design of, 91, 100
principles of, 12–13, 91
protocol-based simulations
advantages of, 100
description of, 98
long-term potentiation hypotheses studied using, 98–99
synapse modeling
description of, 93–95
dynamic synapse neural network
axon terminal, 97
description of, 95–96
leaky-integrator equation, 96

Elementary objects of the nervous system (*continued*)
learning algorithm, 96–97
mathematical expressions of, 96
speech recognition case study, 97
Embedded objects, 162
EndNotes, 256
Entity integrity, 31
EVEREST
description of, 267–269
free list, 272
implementation of, 275
limitations of, 275
objects
allocation of, 272–273
de-allocation of, 273–275
preventive characteristic of, 281
Excitatory amino acid transporters, 223
Experimental protocol
data-gathering procedures and, 118
description of, 5, 11, 46
experimentBlock, 308
Explicit semantic primitives, 34
Extendible parent tables, 137–138, 301–302
External globus pallidus, 50

F

Fagg-Arbib-Rizzolatti-Sakata model, of parietal-premotor interactions in control of grasping, 46, 107–111
Federated databases
cooperative
environmental characteristics of, 247
heterogeneity in
common ontology uses, 244
data model, 242–244
description of, 242
semantic, 242–244
information flow patterns in, 248
information frameworks, 241
information repositories, 241
information sharing, challenges associated with, 241–242
schematic representation of, 242
definition of, 231
description of, 5, 19–20, 231–232
goal of, 231
information discovery, 232
information sharing
caching method of, 235
copy method of, 235
direct link method of, 235
export determinations, 236–237
import determinations, 236–237
import/export based sharing paradigm, 233–234
primitives/tools for, 236–237
remote-query execution method of, 236
time-bounded copy of, 236
information sharing phases, 38–39, 231
NeuroCore provisions, 136
neuroscience, 237–238
overview of, 38–39
schematic representation of, 232
semantic heterogeneity resolution, 232–233
system-level interconnection, 233–234
Flatmaps, 176

G

GENESIS modeling system, 5, 9
Geographical information system
coverages, 182–183, 185–186
definition of, 180
description of, 179–180, 186–187
layers, 181–182
raster data
coverages, 185–186
description of, 180, 185
spatial relationships, 185
rectification, 183–184, 186
registration, 183–184, 186
spatial data, 180–181
spatial relationships, 181
vector data, 182
Glutamate
receptors
description of, 218
regulation of, 218–219
transporters of
description of, 222–223
excitatory amino acid transporters, 223
kainic acid regulation, 224–225
Ground control point rectification/registration, 184

H

Heterogeneous data
description of, 4
handling considerations for, 131–132
Hierarchical storage systems
capacity of, 266–267
components of, 266
description of, 265–266
space management
analytical model of, 279–283
description of, 267
techniques for
Dynamic, 269–272
performance evaluations of, 276–279
REBATE, 269, 275–276, 282
simulation studies, 276–279
Standard, 269
target environment, 268–269
Hippocampus
description of, 9, 43
in spatially guided navigation
description of, 61–62
locale system, 62
parietal cortex interactions, 62–64
taxon system, 62
taxon-affordance model, 64–66
world graph model, 64–66
in trace conditioning, 57
Hodgkin-Huxley model, 72
Holism, 44
Homology. *see also* NeuroHomology database

theory concept in, 320–321
N-Methyl-D-aspartate, 125, 218
Nonlinear warping, 174
Non-metric multidimensional analysis, 323
Nonparametric cluster analysis, 323

O

Object uniformity, 34
Object-based database model
attributes, 35–37
characteristics of, 34
classes, 35–36
classificational, 237–238, 247–338
components of, 35
description of, 33–34
Object-based databases, 4
Object-oriented programming, 74, 92–93
Object-relational database, 4
Object-relational database model, 37–39
Objects
active, 34
classification of, 246
embedded, 162
Ontology
base, 232, 247–249
common
classifications, 246–247
database interoperation, 245
description of, 244
information retrieval, 245
information sharing issues regarding, 244
Internet resource directory, 245–246
definition of, 21, 244
derived, 232, 247, 249–250
dynamic classificational

Ontology (*continued*)
base ontology, 232, 247–249
classificational object-based data model, 237–238, 247–338
components of, 232
definition of, 241
derived ontology, 232, 247, 249–250
description of, 21, 247
information sharing mediators
description of, 241, 250–251
discovery, 252–253
export, 251–252
principles of, 232
prototype, 254
Optimal set analysis, 323

P

Parietal cortex
hippocampus and, interactions between, 62–64
premotor cortex and, in control of grasping
description of, 43, 46
F5 selection, 46, 48, 108, 110
Fagg-Arbib-Rizzolatti-Sakata model, 46, 107–111
synthetic positron emission tomography findings, 48, 107–111
Personal laboratory databases, 7
_personImplementation, 305
_personModel, 305
Phaseolus vulgaris leuco-agglutinin, 189–190
Point pairs matching, 205
Positron emission tomography
neurophysiology considerations, 104
operating principles of, 103–104
synthetic
activation differences, 111–112
advantages of, 111–112
definition of, 104
description of, 13–14
human positron emission tomography findings compared with, 109–111
localization, 104
modeling activation, 104–105
parietal-premotor cortex interactions in control of grasping, 48, 107–111
principles of, 104
saccadic eye movement studies using, 105–107
three-dimensional models of brain structure, 174–176
Prefrontal cortex, 74
Premotor-parietal cortex, in control of grasping. *see* Parietal cortex
Primitives
definition of, 292
explicit semantic, 34
NeuroScholar, 292–293, 295
Prism adaptation
cerebellar role in, 56
Dart model of, 299, 302
description of, 56
Protocol viewer, 162
Protocol-based simulations
description of, 98
long-term potentiation hypotheses studied using, 98–99
Public refereed databases, 7
Publishing, model for on-line, 22
Purkinje cells
climbing fibers, 55
firing rates of, 58–60
input for, 55

R

Random access memory, 266–267
REBATE, 267, 275–276, 282
Rectification, 183–184
Refereed databases, 7
Referential integrity, 31
Registration, of autoradiographs
classification criteria, 204
description of, 203–204
intersubject
brain atlases, 206
curve matching, 207
definition of, 206
elastic approach, 208
intensity-based strategies, 207–208
model-based strategies, 206–207
point pairs matching, 207
surface matching, 207
viscous fluid approach, 208
intrasubject
curve matching, 205
description of, 204–205
intensity-based strategies, 205–206
point pairs matching, 205
surface matching, 205
NeuARt integration, 227
transformation method, 203–204
Relational databases, 4, 30–32
relevancyType, 307
Repositories
description of, 117–118, 265–266
empirical data, 6, 20, 288, 299
model, 6–7
space management of
analytical model of, 279–283
description of, 267
techniques for
Dynamic, 269–272
performance evaluations of, 276–279
REBATE, 269, 275–276, 282
simulation studies, 276–279
